DETAILED ACTION

The applicants' transmittal of a certified copy of the priority document along with its English translation has overcome the rejection based on the prior art of Yamada [662] in the last office action, dated 7/30/03.

Allowable Subject Matter

Claims 1-8 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance: With respect to independent claims 1,8, the prior art of record does not teach nor suggest "... finding data about a accumulative or averaged current distribution on the sample from detected values of electrical current; and displaying a brightness-based map on a display unit according to the found data about the current distribution during the given time" in combination with the rest of the claims. Since this aspect is not disclosed nor taught in the prior art of record, independent claims 1,8, and dependent claims 2-7, which also incorporate this aspect, are deemed allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent No. 6,323,484 to Ide et al, is deemed pertinent to the applicants' disclosure due to its discussion on a method and apparatus for sample current spectroscopy surface measurement. However, the present application remains patentable over this art due to the fact that Ide [484] does not teach nor disclose, "... finding data about a accumulative or averaged current distribution on the sample from detected values of electrical current; and displaying a brightness-based map on a display unit according to the found data about the current distribution during the given time."
